Abstract of JP7170332

PURPOSE: To receive a message recorded in the mail box of a certain individual out of any unspecified telephone set in a telephone exchange system in which an electronic mail system is connected to a private branch exchange. **CONSTITUTION:** Individual information is stored in an ID card. When this individual information is read from a card reader, a telephone set 1 transfers that individual information to the private branch exchange. When a mail service request from the telephone set 1 is recognized, a central control unit 8 of the private branch exchange transfers the received individual information to the electronic mail system, the call connection between the telephone set 1 and the electronic mail system is controlled, and the state of transmitting the message to the telephone set 1 is set.
